

Table of contents

List of figures	xii
List of tables	xix
1 INTRODUCTION	1
2 REVIEW OF LITERATURE	9
2.1 History, taxonomy, cultivation of tea and its challenges	9
2.2 Plant-insect interaction – an overview	11
2.3 Transcription factors involved in plant-insect interaction	16
2.4 Taxonomy, life cycle of <i>H. theivora</i> and its infestation on tea	17
2.5 Non-coding RNAs – their potential in plant developmental processes and stress response	20
2.5.1 miRNA	21
2.5.2 siRNA	23
2.5.3 circRNA	24
2.5.4 Long non-coding RNAs – undeniable mediators of plant biotic stress response	25
3 MATERIALS AND METHODS	29
3.1 Sample harvesting for biochemical analysis	29
3.2 Total phenolics estimation	29
3.3 Totals flavonoids estimation	30
3.4 Antioxidative enzymatic assays	30
3.4.1 POX	30

3.4.2 APX	31
3.4.3 PAL	31
3.4.4 PPO	32
3.4.5 CAT	32
3.5 Plant materials and stress treatments	32
3.6 RNA isolation, library construction and Illumina sequencing	33
3.7 LncRNAs	34
3.7.1 Bioinformatics pipeline for identification of lncRNAs and differentially expressed lncRNAs (DELs)	34
3.7.2 LncRNA target gene prediction	35
3.7.3 Functional annotation and gene set enrichment analysis (GSEA) of lncRNA targets	35
3.7.4 Quantitative real-time PCR of selected DELs	36
3.8 Genes	39
3.8.1 Identification of differentially expressed genes (DEGs)	39
3.8.2 Functional annotation and gene set enrichment analysis (GSEA) of DEGs	39
3.8.3 Quantitative real-time PCR of selected DEGs	39
3.9 CircRNAs	41
3.9.1 Pipeline for identification of circRNAs and DECs	41
3.9.2 Expression correlation analysis of DECs and DEGs	42
3.9.3 Functional annotation of DECs	42
3.10 Collection of miRNA data	44
3.11 miRNA target prediction	44

3.12 eTM prediction	44
3.13 Network construction and visualization	44
4 RESULTS	45
4.1 Biochemical changes in the tea plant in response to TMB-herbivory	45
4.1.1 Estimation of total phenolics	45
4.1.2 Estimation of total flavonoids	46
4.1.3 Enzymatic antioxidants	46
4.1.3.1 POX	47
4.1.3.2 APX	47
4.1.3.3 PAL	48
4.1.3.4 PPO	49
4.1.3.5 CAT	50
4.2 Sequencing reads summary	51
4.3 LncRNAs	52
4.3.1 Identification of lncRNAs	52
4.3.2 Characterization of lncRNAs	54
4.3.3 Expression of lncRNAs	56
4.3.4 Differential expression of lncRNAs	57
4.3.5 Identification of lncRNA-target genes	61
4.3.6 Functional annotation and enrichment analysis of lncRNAs	63
4.3.7 Quantitative real-time PCR of selected DELs	70
4.4 Genes	72
4.4.1 Expression of genes	72
4.4.2 Differential expression of genes	74

4.4.3	Functional annotation and enrichment analysis of DEGs	75
4.4.4	Quantitative real-time PCR of selected DEGs	80
4.5	Comparison between lncRNAs and mRNAs identified in this study	82
4.6	CircRNAs	84
4.6.1	Identification and characterization of circRNAs	84
4.6.2	The differential expression pattern of identified circRNAs	86
4.6.3	Functional characterization of DECs	88
4.7	miRNA targets, eTMs	91
4.8	ceRNA network	118
5	DISCUSSION	120
5.1	Biochemical changes in the tea plant as a result of TMB feeding	120
5.2	Change in expression pattern of genes/lncRNAs involved in primary metabolism	121
5.2.1	DEGs related to primary metabolism of <i>C. sinensis</i> in response to TMB	121
5.2.2	lncRNA mediated regulation of genes related to primary metabolism of <i>C. sinensis</i> in response to TMB	124
5.3	Change in expression pattern of genes/lncRNAs involved in secondary metabolism	126
5.3.1	DEGs related to secondary metabolism of <i>C. sinensis</i> in response to TMB	126
5.3.2	lncRNA mediated regulation of genes related to secondary metabolism of <i>C. sinensis</i> in response to TMB	128
5.4	Interaction between DEGs and their involvement in some important	

defense responsive biological pathways	129
5.5 Involvement of circRNAs in tea-TMB interaction	133
SUMMARY AND CONCLUSION	136
